

Presentation on SE 121

Section: 43A / 43B / 43C

Deadline: 10th April, 2026

For the presentation, I would like to ask you to follow the following rules and submit it thoroughly.

Presentation topics

For the presentation of SE 121, you are asked to choose any topic from the course syllabus (introduction to C programming, data types, operators, loops, if-else statements, switch case statements, arrays, and strings) to prepare the presentation.

Instruction for preparing presentation material

- **PowerPoint:** Use PowerPoint for presentation material (can use other software as well)
- **Use Visuals:** Include diagrams, flowcharts, and code snippets in your slides.

Instructions for recording the presentation

- **Record :** Record the presentation with the presentation material and must turn on the camera while recording
- **Live Coding:** Demonstrate simple programs during the presentation.
- **Time:** Keep the presentation time **maximum 6 minutes**

Submission guidelines

Powerpoint material submission: convert the PowerPoint material into a PDF file, save the file with your ID (253-35—), and **submit the file in BLC** corresponding group (A, B, C)

Recording submission: Save the recording with your ID and submit to the following **Google Drive link** with the corresponding section.

Google Drive Link for Section A

https://drive.google.com/drive/u/1/folders/1BaNDw7NkiAIs6d2hTLRzbEi_Y7Je5pHC

Google Drive Link for Section B

<https://drive.google.com/drive/u/1/folders/1EWdN9K5oMqzmXSgprNPYbyKl9nNh8EaY>

Google Drive Link for Section C

<https://drive.google.com/drive/u/1/folders/1AgFkboNP-aN9Ug-DMVSR-CX8YBMz2zrv>

Deadline

The deadline for both BLC and Google Drive Link submission is 10th April, 2026

Sample Topics (you can choose any topic within the syllabus): not fixed

1. Introduction to C Programming

- o What is C? Why is it important?
- o Basic structure of a C program (main function, headers, etc.).
- o Writing and running your first C program.

2. Variables and Data Types in C

- o Explanation of int, float, char, double, etc.
- o How to declare and initialize variables.
- o Simple examples of variable usage.

3. Operators in C

- o Arithmetic operators (+, -, *, /, %).
- o Relational and logical operators (==, !=, &&, ||).
- o Examples of operator usage in programs.
