**Subject: Application for the post of Software Engineer**

Dear Hiring Team,

I saw the posting for a **Software Engineer** on bdjobs.com published on 1 December and wanted to reach out directly. It is rare now-a-days to find a role that balances technical part with the creative freedom to build a great web and mobile applications, which is exactly the kind of environment I thrive in.

I hold an **MSc in Software Engineering** and have spent the last three years working in the software industry. I don't only write code; I make the code filled with quality. Whether I am digging into software requirement specifications or designing technical documents, I focus on solving the actual business problems.

In my Previous role, I learned how to handle the pressure of tight deadlines without sacrificing any quality in the codes. I am also comfortable jumping between multiple projects at once, it can be a backend system work or can be a simple frontend change.

I am currently based in Bangladesh and am fully open to work from anywhere in the country as described. I have attached my CV, academic certificates, experience certificates and also my National ID as requested. I would love the chance to discuss my experience if it fits with your team's goals.

Best regards,

**Ocean Mallik**
